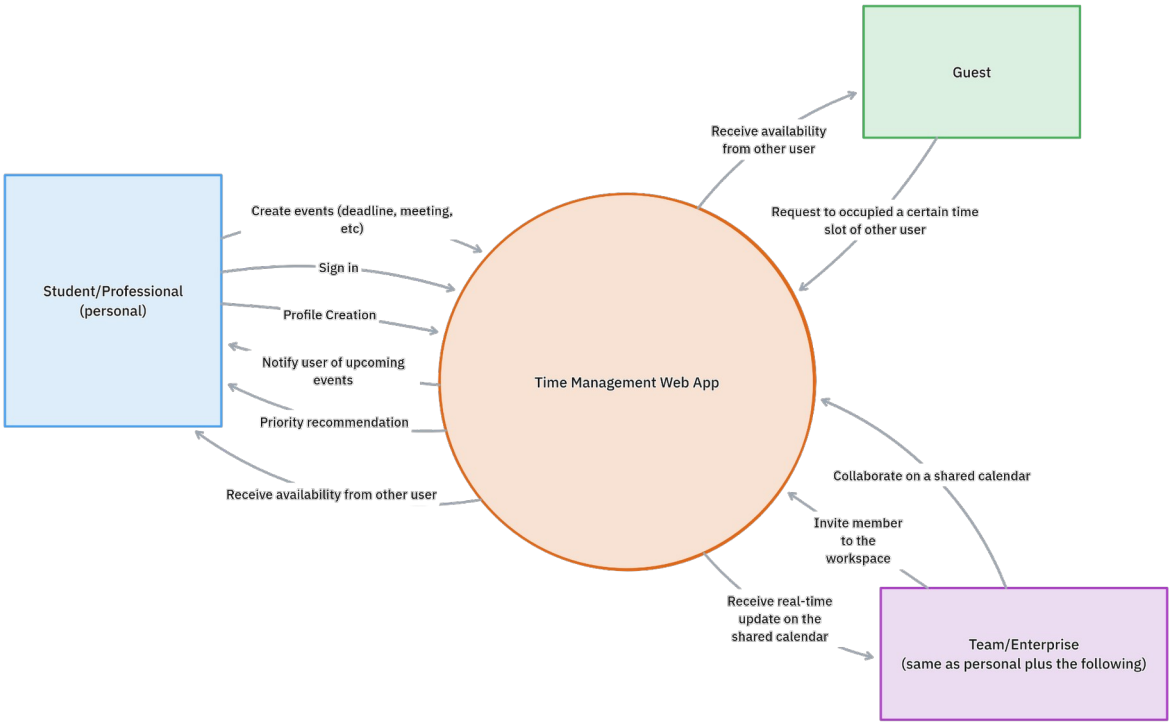
1. Business Context Diagram



Requirement Scope Area	Description

Time Management Application	Our Project is responsible for providing all features listed in the scope of our application.This is the main point of usability for all users of the application, thus allowing for: • **Personal user:** Create task, track progress and share availability • **Guest:** Receive availability link, check for common time, and book time slot with other users • **Team/Enterprise:** create meetings, deadlines and notes as well as allocate time for said events.

External Entity	Description
Student/ Professional	Individuals use the app to manage tasks,schedules,meetings, and deadlines.They can create tasks, set recurring schedules, track progress with prioritization, and share availability with peers planning.
Guest	Non-registered users who access shared availability links to book meetings or appointments with registered users. They can open availability links, select a time slot , and submit booking requests.
Team/Enterprise	A group of users (Student/Professional) working together on a project who use the app for the real-time collaborative time-management workspace.

Information Flows	Description
Sign Up/Sign in	Users can create a personal account and sign in with their credential to manage personal data and have their input sync across devices.
Profile Creation	Users can create and configure their profiles to get started on the platform with basic information. They can also provide preferences for better experience with the application
Create event	Users can create events both recurring and not recurring. These events include deadlines, meetings, classes, exams.
Priority Recommendation	Based on questions asked to users during the signup process, our project will be able to assign priority to each event and notify users about events in priority order.
Availability request	Guest users will be able to send requests to users and our project will be able to find availability in the users calendar.
View User Availability	A guest (non-registered) user or registered user can receive and view other user availability when shared.

2. Requirements Scope Statements

HLR#	Description	Priority (H, M, L)
HLR01	The system must allow users to create, edit, delete, and track tasks/events.	H
HLR02	The system must support recurring schedules for classes, meetings, and tasks.	H
HLR03	The system must provide customizable (daily, weekly, monthly) view	M
HLR04	The system must include a priority recommendation for task management.	M
HLR05	The system must send reminders,notifications for upcoming events or deadlines.	M
HLR06	The system must allow user to share their current availability with other users	L

HLP07	The system must allow user to view the shared availability from other other users and find common available time	L

3. High Level Business Requirements Sign-Off

The undersigned acknowledge their agreement with the contents of Version 1.0 of the High-Level *Requirements document for Time Management Web App.*

Following approval of this document, requirements changes will be governed by the project's change management process, including impact analysis and appropriate reviews and approvals, under the general control of the Project Plan and according to company policy. Approved Change Request Documents, if present, will be attached to this Requirements Document as updates.
